EGALTEX PON

Levelling agent for direct and vat dyes.

Chemical character: synergistic mixture of anionic and non-ionic substances

Ionic charge: anionic / non-ionic

Appearance: dark brown liquid

pH of the sol. 1:10: neutral

Solubility: excellent in all concentrations

Stability: excellent for alkalis and mineral salts in normal conditions of use

Properties: excellent levelling and penetrating power. Good wetting power. It does not generate foam.

Use: Egaltex PON is a levelling agent for dyeing with direct and vat dyes. It has an excellent levelling power, especially for those dyes that have a low migratory power. An important characteristic of the product is that the rate of exhaustion of the dye is not decreased. Due to its chemical composition, it is possible to obtain perfectly penetrated dyeing even with thickly woven fabrics or with very twisted yarns. With Egaltex PON it is possible to work with mixtures of dyes with both very little and excellent levelling power. It's ideal in poorly levelled dyeing, as it is capable of leveling any differences in intensity, without having to completely or partially discharge the dye from the fiber.

Doses:

light shades:	2-3% s.p.m.
Medium shadestones:	1-2% s.p.m.
dark shades:	0.5-1% s.p.m.

Stability / storage: fear frost, after conditioning returns effectively. 12 months stability.

Keywords: direct, vat, levelling
