GAMMASOFT CD

Pseudo amphoteric softener for all fibers, it is not yellowing the fabrics.

CHEMICAL-PHYSICAL CHARACTERISTICS:

Appearance: whitish liquid.

Chemical composition: amide derivative.

Ionic charge: pseudo amphoteric.

Compatibility: with cationic and non-ionic products.

pH: ~ 8

Storage: good under normal environmental conditions.

PROPERTIES:

Gammасoft CD differs from the other softeners, especially for its lack of influence on white backgrounds, even if obtained by anionic optical brighteners.

Gammасoft CD is specific for cellulosic fiber and regenerated ones, but also gives excellent results of other fibers, including polyester. It is also indicated for those fabrics intended for textile raising process, so that too many steps are avoided in the raising machine, leaving a soft and swollen touch.

Gammасoft CD can be applied by padding or exhaustion; for white cellulosic materials, we recommend the application in slightly acid or neutral bath.

Gammасoft CD can be applied in bath with anti-crease resins; it is also widely compatible with organic and inorganic catalysts; however, it is recommended preliminary tests.

USE:

We recommend the following dosages:

* Exhaustion: at 40°C for 20' liquor ratio 1/8 - 1/12

- Cotton yarn 1-2%

- Knitted cotton fabrics 2-4%

* Pad : from 20 to 40 g/l depending on the required effect.

Keywords: softener, amphoteric
