GAMMASOL SV liq.

Gammasol SV liq. is an amino-group derived product, together with carboxylic acid groups. This is a special product employed to enhance solubility and dispersion of dyes, when solved or dispersed into water, giving also stability in time.

Sliding properties of fabrics (e.g. knitwear cord) will be enhanced, too.

Gammasol SV liq. owns ionic nature; it is resistant to electrolytes (when employed in the ordinary concentrations of textile field)

HOW TO USE

- as fluidizer during solubilization or dispersion of dyes = 20-40 g/l
(depending on dye concentration);

- to help fluency of fabrics = 4-8 g/l

Foam production is low during, standard usage.

Keywords: solubilizing, dispersing, sliding, fluidifying, knitwear.

The present information in this circular are based on ours put into effect their experiences and acquaintances. Such data not esimo the utilizzatore leading its tests, in order to adapt the product to the own requirements of working. From our data a binding guarantee will not be able to derive legally of determined quality or property for a concrete field of employment.
